Abbott

1. Product Information

Diabetes is a pandemic today and glucose monitoring remains one of the key challenges in diabetic management. In an Indian study, more than 60% of people with diabetes were found uncontrolled. Furthermore, **current monitoring tools have important shortcomings**. SMBG and lab test results provide sporadic glycemic data points, thereby limiting the patient profile that you get for your decisions. The HbA1c is an average figure that helps you determine control but does not provide a complete glycemic picture for you to make more informed decisions.

Our innovation

We at Abbott Diabetes Care are excited to present to you our latest innovation in diabetes monitoring, the **FreeStyle Libre Pro Flash Glucose Monitoring System**. The FreeStyle Libre Pro is a 14-day sensor-based glucose assessment tool that shows you how your patients' glucose levels vary throughout the day, revealing both hyperglycemia and hypoglycemia. This complete glycemic profile allows you to make more informed treatment decisions for better outcomes.

Flash Glucose Monitoring

Flash glucose monitoring is an easy way to generate the dense glucose data needed for a complete glycemic picture. What makes flash glucose monitoring unique is the quick scan of the reader over the sensor to collect glucose data.

Key Features

We would like to draw your attention to some of the key features that would greatly enhance your clinical practice:

1. The patient wears a **small sensor** (5 mm height and 35 mm diameter) on the back of upper arm. This sensor measures glycemic data continuously for 14 days, providing up to 1,340 readings for a data-rich analysis. Moreover, the sensor is fully disposable and **eliminates the need for finger prick calibration**.
2. The system **reader quickly scans** the sensor to retrieve your patient's complete glycemic profile using Near Field Communication (NFC) technology. A single reader can be used to start and gather data from sensors on multiple patients.
3. The FreeStyle Libre Pro **software** delivers powerful reports from glycemic data that help you in your clinical decisions. **Daily Patterns** (with Ambulatory Glucose Profile and glucose traces) shows patterns which can help detect potential problems, such as hypoglycemia, hyperglycemia and glucose variability. **Glucose Pattern Insights** (with and without glucose readings) make critical decisions easier with an **inbuilt Likelihood of Low Glucose Algorithm**. Furthermore, the **Daily**

o.k.

Abbott

Glucose Summary can make this report a great communication tool for your patients, involving them in their diabetes control, thereby improving your clinical outcomes.

4. One of the visual reports is the Ambulatory Glucose Profile (AGP) that collapses a patient's glucose readings from several days/weeks into a representative 24-hour graph making it easier to **visualize glycemic patterns**. AGP provides 2 sets of comparative patient glycemic data at a glance:

- a. Variations within a day (highs and lows), that can be compared to a target range.
- b. Day-to-day variations denoted by breadth of the profile.

We are confident the FreeStyle Libre Pro Flash Glucose Monitoring System will aid your clinical decisions and also involve your patients in diabetes management, thereby helping in improvement of clinical outcomes.

2. Price (INR) Proposal:

Sr.	Item Name	Specifications	UOM	MRP	Offer Price
1	FreeStyle Libre Pro Reader	For Health Care Professional use	1 Unit	INR 5498.90	INR 4909.73 + GST
2	FreeStyle Libre Pro Sensor	To be applied by the Healthcare Professional	1 Unit	INR 2198.90	INR 1727.71 + GST

Reader will be provided by client. Price jumped and approved.

Terms and Conditions:

Any statutory increase in the rate of Excise Duty / Sales Tax, fresh levies or any price revision granted to us by the Government of India as per DPCO 1995 and amendments thereafter, the same will be extra to the account of the buyer.

The stock will be supplied from Abbott Authorised Stockist with the payment term of 30 days from date of delivery.

The quoted rates are based on current MRP of the product. If any MRP revision is effected due to the change in import cost, price to hospitals / institutions will be revised accordingly.
